BELIZE ESSENTIAL INFORMATION

Please take your time to read through this Essential Information. This is your guide to travel planning, full of helpful information to ensure you are properly prepared for your trip to Belize with Island Expeditions Co.

GENERAL ARRIVAL NOTES

All IEC trips begin with a 'Day 0'. This means that you will need to be in Belize City the day before your trip is scheduled to start. For Example, when the brochure trip date is Dec. 28, you need to arrive into Belize on Dec. 27. Our trips are structured so that a seven-day trip is seven-days in the field and the Day 0 is really meant for international travel and connecting with us once you arrive in Belize. We also feel that if you have the time, it is a good idea to arrive in Belize one day before the Day 0, particularly if your international flight connections are tight or you are departing from a region where it is possible that bad weather will cause flight delays. If you are traveling in Belize independently before your trip, be sure to co-ordinate alternative rendezvous arrangements with our office prior to your departure.

To ensure that your flight schedules correspond with the departure date of your trip, it is best to confirm your flight itinerary and dates with our office. If you are not arranging your flights through our office please ensure that you or your travel agent email or fax us a copy of your proposed flight itinerary prior to booking

Changes in Airport and Immigration security can make processes unpredictable, so it is important that you stay current with these issues in your originating region.

DEPARTURE FROM BELIZE

Your trip finishes at the Belize Biltmore Plaza, 2 1/2 miles north of Belize City where we stay on the last night of the trip. We usually arrive in from the Cays late in the late afternoon, and you'll likely be tired from a full morning of paddling, swimming and snorkelling. The Biltmore is a comfortable and convenient location to end the trip as you are only 20 minutes from the International Airport the following morning. Depending on when your flight departs you can arrange with the hotel front desk for a taxi (it's always best to confirm the fare in advance)to take you to the international airport . We always recommend checking with your fellow travelers to see if you can share a ride to the airport. For those trip participants that will be traveling to other parts of Belize, Belize City is a transportation hub of the country and you can get to anywhere in the country from here. Please let us know your plans for post trip arrangements and we will be happy to advise you on your best options.

INDEPENDENT TRAVEL NOTES

You may wish to arrive a few days before the start of your adventure or you may be traveling elsewhere in Belize after the trip. We can recommend places for you to stay and help you make reservations. We suggest that you search the internet, visit a library or travel bookstore, read up on places in Belize that are of interest to you, and then call us with any questions. A recommended reading list is enclosed at the end of this document to help. Please understand that we are more than happy to assist with your travel plans, separate from your trip with IEC, but cannot be deemed responsible for any services not actually provided by Island Expeditions Co.

ON ARRIVAL INTO BELIZE

The Belize International Airport (Phillip Goldson International Airport—airport code BZE) is small and easy to get around. You will disembark your plane directly on to the airport tarmac and will be directed to Immigration and Customs. After your passport is stamped, you collect your bags and move through the customs area. The whole process can take up to, but usually less than one hour. After completing your check-in, porters are standing in clear view and are there to assist you with your bags if you wish, but it is a very short distance to where we meet you. Please be aware the porters are not employed by the Airport Authority, they can be very keen to get your business and they charge 1 Bze dollar for each bag. You are not obligated to use their services.

RENDEZVOUS

“I will be arriving into the BELIZE INTERNATIONAL on the scheduled Day 0 of my tour.”

An Island Expeditions representative will be at the International Airport to meet you on the ‘Day 0’ of your tour based on your international flight arrival time as confirmed with our North American administration office. After passing through Customs immediately exit the Airport Building to your right. And your IEC representative will meet you just outside of the doors. Please be patient as road conditions and late arrivals of International flights may cause delays. We are aware of all our guest’s flight arrivals, however, if our driver has not yet arrived to meet you within fifteen minutes of arrival, contact our **Dangriga office Tel**

522-3328 to let us know of your status & for any rendezvous updates. Please dial the operator at 115 and request station to station collect when calling our Dangriga office.

As trip participants will be arriving in on different flights throughout the arrival day we have arranged a transport to the Biltmore Plaza Hotel as a pleasant and comfortable place to wait (we’ll be staying at the Biltmore on our last night) where those who have arrived on earlier flights can wait for the remainder of the group participants to arrive into Belize. On arrival please let the front desk know that you are with Island Expeditions and that you are not staying with them that night, There is a lovely inner courtyard with a restaurant, bar and swimming pool (so have your swimsuit handy). Typically we’ll have gathered all trip participants by 4:00-5:00 pm and be heading on our way to the Tropical Education Center.

1:00-1:30 pm - The first vehicle will depart the International Airport between 1:00 and 1:30 pm to the *Belize Biltmore Plaza Hotel* where you will be able to relax by the pool, have a drink at the outdoor bar, eat a meal and wait for all other guests to arrive. If you arrive earlier than this scheduled pickup and do not want to wait at the airport for the driver, please feel free to take a cab to the Biltmore Hotel approximate cost is \$60 Bze (\$30 USD) for a taxi into Belize City from the airport. Please be sure to call our office in Dangriga and let us know where we will find you. Please be sensitive to the needs of the hotel as their first priority is for their overnight guests, on arrival take a moment to say hi at the front desk and let them know you are waiting for a vehicle pick-up Any questions regarding the trip and scheduled pick-ups should be directed to our office in Dangriga. Departure from the Biltmore Hotel to our first night’s accommodation will be at approximately 4:00-5.00 pm.

“I have been looking for flights, and all I can find are flights arriving in the evening.”

For those people that have flights that arrive later in the day (after 4:00pm) you will need to arrive into Belize City the day before the scheduled Day 0 meeting day. This year, we have seen some flights arriving into Belize City as late as 7:00pm. For those travelers requiring an extra night, we recommend the Belize Biltmore Plaza, so we can meet you in the lobby the following day by 4:00pm. Please contact our office for assistance with such arrangements.

“I’m arriving into Belize earlier than Day 0 or I’m arriving into Belize by road.”

Whether traveling independently before your trip or arriving by any port other than the International Airport please be at the *Biltmore Plaza Hotel* (Mile 2 ½ Northern Highway Tel 223-2302) by 4:00pm or earlier on ‘Day 0’ of your tour. Our representative will be arriving from an International Airport pickup sometime after 4:00-5.00 pm. It is difficult to give an exact time but please be patient as late arrivals of flights may cause delays. If you are traveling in Belize in advance of your trip we recommend you call our office in Dangriga prior to ‘Day 0’ to confirm that you have in fact arrived and that you will be at the Biltmore Hotel on ‘Day 0’ . On occasion adjustments may need to be made to rendezvous times or venues due to special guests arrangements or international flight schedules.

TRIP PREPARATIONS

PASSPORTS AND VISAS

A current passport is required for Canadian, American and British citizens for travel in both Belize and Guatemala. For citizens of other countries you should contact your embassy or consulate for entry requirements. We suggest that you carry a photocopy of your passport with you while traveling, keep it in a separate place from your passport, and also leave a copy with a friend or family member at home.

INSURANCE

On all IEC trips, **it is mandatory to obtain a short-term traveler's insurance policy** to ensure that you are covered for medical expenses in case of illness or accident while traveling. This policy should cover all medical expenses and emergency evacuation expenses while in Belize. We also highly recommend that you purchase a trip cancellation policy to cover the costs of your international flight and tour with Island Expeditions. Trip cancellation protects you in the event you have to cancel your trip in the event of personal or family illness. Your insurance should be purchased within a week of your flight payment and trip deposit

There are many places where you can purchase your insurance. We have researched a variety of options and feel that Travel Guard overall provides the best service at competitive rates. You can find their information on our website www.islandexpeditions.com/insurance.html or call Travel Guard International toll-free at 1-800-826-4919 and quote company code 116235 for their profile of Island Expeditions to pop up.

MEDICAL

Please remember that you are responsible for consulting a medical professional prior to trip departure regarding all the above considerations.. Also, if you experience any unusual symptoms after returning home from your trip, please call our office and let us know as we may have information that will help determine your condition.

Though not rigorous, IEC trips can be physically challenging. As such, a thorough medical examination is advised. A medical questionnaire is enclosed and must be completed prior to your trip departure. The following are recommendations for your protection:

Tetanus - A current tetanus inoculation is mandatory to participate in any IEC trip. Tetanus shots are usually good for ten years. If you are unsure of your last inoculation please check with your doctor.

Hepatitis A - We recommend a vaccination to protect you against Hepatitis A: Havrix* a series of two inoculations. The first covers you for a year and the second is administered a minimum of 6 months later and is good for up to 20 years. There is also another option which covers you for Hep A & B, called Twinrix. Please contact your local physician for details.

Malaria- even though we have very limited exposure to malaria-carrying mosquitoes taking an anti-malarial can reduce the risk of exposure on our Lighthouse Reef trip A program usually starts two weeks prior to the commencement of your trip and continues five weeks after you return home. Consult your doctor or local travel clinic for details.

Dengue Fever - Transmitted by mosquitoes, symptoms are flu-like. It is becoming more prevalent in rural and even urban areas in the tropics. The most important preventative measures are to wear pants, socks and a long sleeve shirt in the evening hours or early morning when mosquitoes are out. Also use liberal amounts of insect repellent on your clothes.

Typhoid & Polio - Consult with your physician. It is not considered a problem in Belize.

PERSONAL MONEY, SPENDING AND EXTRAS

1 US dollar = 2 Belize dollars US cash is accepted everywhere

As IEC trips are inclusive, personal spending money will depend on your own needs. The opportunity to purchase souvenirs, extra alcohol, a cold drink, or a wayside snack does exist. We recommend you bring a combination of US cash and travelers cheques (a few \$50's with the majority in small denominations such as, \$20's, \$10's, \$5's, and a few \$1's). We also strongly recommend that you separate your cash so you are not carrying it all in the same place. In addition to your spending money, it is a good practice, when traveling, to carry an amount of emergency cash. A contingency fund of \$150– 300 US above and beyond what you expect to spend on incidentals will help with any additional charges that may occur due to late arrival, missed connections, lost luggage, inclement weather and other circumstances beyond yours or our control. Travelers' cheques are accepted in many places however, because of irregular banking hours, it is not always possible to cash them. VISA, MasterCard and American Express are taken in some establishments in major centers such as Belize City, but a 5% service charge to use them is customary. Cash advances can sometimes be made on Visa and MasterCard at local banks, although it is better not to depend on this. US cash is accepted everywhere. Also, drawing money from an ATM should not be part of your budget plan. Although bank machines are becoming more and more frequent in the cities and towns of Belize, many of them are not yet connected to the North American banking system.

A Government of Belize departure Tax of \$35US is levied on outgoing international flights from Belize (some of the airlines include this fee in your ticket price) and is due by you at the airport in Belize before you depart the country. There is also a domestic air tax of \$2 BLZ for each domestic flight from the Belize International Airport. For those exiting Belize overland, there is a departure tax of approximately \$35 US applicable to tourists 12 years and older, at all land borders.

TIPPING

Tipping for great service and going-the-extra-mile is traditional in the adventure travel industry. We feel that a tipping budget totaling between \$50 to \$200 US per person is a good range to consider.

On your Lighthouse Reef trip you will typically have 2 sets of guides– one for your first day and a half inland portion and another guide team for the reef portion of the trip. You can tip individuals for outstanding service within your guiding team or provide a general tip for the entire guiding team. Whichever you feel most comfortable with.

For the inland guiding team, we suggest giving them tips before you board the charter boat in Belize City, as you will not see these people at the end of the trip. For those that want to provide a general tip for the island guiding team, a tip box will become available on the last day of your trip. This tip will be shared proportionately amongst the guiding staff, the cooks, the support camp staff, and the operations staff.

GENERAL NOTES ON ADVENTURE TRAVEL IN BELIZE

Traveling along the reefs of Belize by sea kayak is an exciting event and the experiences and insights gained are unique. It is important to remember that when traveling in self-propelled craft of this nature, our day-by-day life is determined by the weather and the sea conditions we encounter on each trip.

While on the water it is necessary to shield yourself from the sun. A sunhat, sunglasses, bandana and waterproof sunscreen should always be close at hand. Sunglasses should be of good quality to protect your eyes from UV rays and a safety band (e.g. croakies) is also recommended to prevent them from being lost.

NOTE: You are undertaking an adventure vacation in *Central America* and will be traveling in remote regions. Rain and storms may be encountered at any time of the year and sand flies may be intense on the cays before or after a storm. During your trip, the itinerary may need to be adjusted to accommodate special guest arrangements because of late transportation, adverse weather or any other circumstance frequently encountered when traveling outside of North America. **Trip leaders are authorized to change or cancel any activity for safety reasons.**

WEATHER IN THE TROPICS

The climate of Belize is sub-tropical. Temperatures range from 20 to 40 degrees Celsius (70 - 105 F) during the day. Although we are traveling during the dry season, there can be the infrequent "Northerly" which blows down from the Gulf of Mexico bringing with it cooler temperatures and rain. These rarely last more than a few days. For those traveling at the beginning of the dry season (December), make sure that you bring a rain-jacket and hat and some warmer clothing. Our traveling philosophy is "all weather is good weather" - since we can't do anything to change it. Trip schedules may need to be adjusted to compensate for inclement weather. Inland conditions can change quickly with afternoon thunderstorms and heavy rainfall common in some parts of the country. Typically, the temperatures range from 20 to 40 C (70 to 105 F) with high humidity during the day, dropping at night to 20 to 27 C (70 to 80) F. From December to May conditions are usually clear, sunny and warm, however December is generally cooler and moister than the rest of the dry season.

BUGS

Yes, they do exist! Weather, wind conditions and proximity to the previous rainy season affect the concentrations of biting insects found on both the cays and the mainland. While camping on the cays, you may need to take precautions against the sand fly, also known as "no-see-ums". These flies are jumpers and are found in the sand, being most persistent in the early morning and evening, especially when the wind is calm. They leave small, red, itchy bites. The itching can be effectively alleviated with Calamine Lotion or an After-bite stick. The most common areas affected are your feet and ankles. The most effective form of precautions are clothing to cover up, and a good deet-based repellent. Lightweight long pants and socks and a light long sleeve shirt will help in times of no wind. Quick-dry fabrics work very well in these instances. Typically, you should look for something with 20%+ deet content for optimal protection. *Deep woods* or *Ben's Insect Repellent* are both good options. The more natural citronella repellents are not as effective.

GARBAGE ON THE CAYS

Unfortunately, garbage (especially plastics) is found throughout the world's coastal regions. Belize is no exception. Weather, wind and currents can all cause excessive build-up of garbage to occur along the beaches and in the mangroves. The sad part is that much of this garbage is from offshore and not from mainland Belize. Besides making sure that we leave no garbage while on tour we organize frequent work crews throughout each season to remove the plastics that are washed up along the beaches of the areas where we camp. Unfortunately, this does not take care of the problem, and garbage can build up quickly.

MEALS & ACCOMMODATIONS

MEALS

Meal preparation is one of our specialties. You can expect a delicious assortment of seafood, fresh vegetables, tropical fruits and fresh baked breads. On sea kayaking adventures, both Belizean and international cuisine is prepared by your guides. Many of our main courses are gathered fresh from the sea each day or bought from local fishermen. On lodge nights, we enjoy specially prepared meals at lodges and local restaurants and picnic lunches while in the field. In Central America, meal service at restaurants can be slow. An extra dose of patience, and a supply of your favorite snacks comes in handy at these times. If you have any special dietary requirements please tell us in advance so that we can do our best to accommodate your needs.

HOTELS AND LODGES

We choose hotels and lodges that are situated within or close to the most spectacular natural settings in Belize and also reflect the character and ambiance of Belize. Hotels and lodges in Belize are usually rustic by North American standards and are often quaint in character. Your comfort, enjoyment and security are our first regard when choosing lodges and hotels. Accommodations vary from ensuite bathrooms and hot running water to our more remote lodging where running hot water and ensuite bathrooms are a rarity. Lodging is based on shared accommodation, two to a room. If you are traveling alone we will do our best to put you in with someone compatible. Often, for a nominal fee, single rooms can often be arranged but we must know of this at time of booking your trip. Please contact our office for details.

Note: From time to time, because of unforeseen circumstances, hotels or lodges listed on your itinerary may need to be changed. These changes will be made at the trip leader's discretion and may be done without prior notice.

TROPICAL CAMPING

You will be staying in wall-tent cabanas on a coral sand beach. These accommodations are placed on a wooden platform, approximately 6 inches above the surface of the sand, and are outfitted with wood-framed beds with a 6 inch thick foam mattress, a wooden night stand, and a kerosene lamp.

Bedding and linens are provided for those participating in our Base-camp trips (ie. Lighthouse Reef and Glovers Reef & Mayan Caves trips). **Please note that towels are not provided.** Please make sure you bring a beach towel that you can use on a daily basis around camp, and possibly a second towel to use after bathing.

WASHING AND TOILET FACILITIES WHEN BASE CAMPING

We use freshwater from a well on the island for all our washing and for showers to wash off the salt. Wash basins with fresh water are located near the toilet and shower. A small mirror is helpful for contact lenses, shaving, etc. Our toilet is a composting pit toilet facility setup by the Belize Audubon Society. These areas are washed and cleaned daily by your guides. This method is approved by the Coastal Zone Management Unit of Belize and is in keeping with the tenets of minimal impact camping. The freshwater showers are located near the toilet facilities and are fed with rainwater and/or ground water. Our standard of practice is to bathe in the sea using an easily sudsing camping or salt-water soap and then rinse off the saltwater in the showers. Please only bring biodegradable soaps and shampoos. This helps to protect the quality of the lens of freshwater on this small island by avoiding soap runoff into the ground.

PADDLING IN THE TROPICS

SEA KAYAKING IN THE TROPICS

Kayaking trips in the tropics differ from northern climates in that much of our exploration is under the water amongst the coral reefs. A typical day will include paddling/sailing from one island to another or to patch reefs within the atoll. Whenever possible we take advantage of the northeasterly trade winds to fill our sails as we travel within the atoll. The protection of the reef wall and shallow inshore waters provide one of the best places in the world for sea kayaking. Our main concerns while on the water are protection from sun (both above and reflected off the water), dehydration, and the effects of salt. Protection from the sun and dehydration are easily managed by wearing a wide brimmed hat, using a good, waterproof sunscreen (SPF 15-35), wearing light colored clothing and, of course, drinking plenty of fluids. As for salt, the high salinity of the Caribbean Sea can dry your skin and cause blisters on hands (paddling) and feet (snorkeling). Skin lotion or moisturizer for your skin, gloves to protect your hands (cotton garden gloves or cycle gloves work very well) and a polypro socks for your feet while snorkeling can be more comfortable.

SNORKELING IN THE TROPICS

For many, the highlight of their trip is the time spent exploring the wonders of the underwater world. This does not require great levels of skill or expensive equipment to accomplish. IEC guides enjoy teaching others the simple skills necessary to enjoy snorkeling. Amongst many of the areas we explore, the water is shallow enough to stand. Initially, we enter the water from a beach but as our skill level increases we will learn to enter and exit from our kayaks. This will enable us to experience longer and deeper dives as well as drift dives, floating along a patch of coral with our boats drifting behind us. To ensure that the reefs are protected for future generations, we avoid damaging the coral by not touching, standing, kicking up silt or dropping anchor on or near coral. As a living organism, many corals rely on nematocysts to sting their prey. These same nematocysts can sting humans, ranging from mild to strong in intensity. Care is taken to show all participants the coral species which should be avoided. If you get cold easily, a lightweight wet-suit (best option) or even a spandex / lycra dive suit to keep from getting cold when spending extended time in the water, is recommended. Polypropylene, capilene or silk long underwear work as well. In addition, this method also protects against sunburn. We highly recommend wet suits for children.

PURCHASING SNORKEL EQUIPMENT

Knowing how to snorkel and what to watch for are all well and good, but inadequate equipment can spoil the best of conditions. Therefore, it is highly recommended that you purchase equipment that fits comfortably. Borrowing a friend's gear is okay for fins and snorkel but a mask must conform to the individuals face to ensure a watertight seal. Nothing is more frustrating for snorkelers than water leaking into your mask. When shopping for a mask check for the following:

- ❑ A smooth seal around the mask. Both rubber and silicone work well. Check that the material is not cracked, brittle or stiff, all signs of an old mask.
- ❑ Press mask to face and inhale through your nose. **DO NOT PUT THE STRAP AROUND YOUR HEAD** but leave it off in front of the mask. If the mask seals, it will stay on your face even if you tilt your head down. Check that no hair gets between the mask and your face to break the seal.
- ❑ Make sure the front of the mask does not press against the bridge of your nose. This will get worse the deeper you dive. Vaseline around the edge of the mask helps for a better seal for men with beards or moustaches.
- ❑ Make sure snorkels fit comfortably in your mouth. With fins, a snug fit is best. Complete foot fins rather than those with a strap around the heel are preferred. Leave enough room for socks if you wish.
- ❑ Above all else, try the mask in water (pool, bathtub, etc.) before you arrive in Belize. A dive shop will gladly exchange an ill-fitting mask for one with a better fit.

PACKING FOR YOUR TRIP

When traveling to Belize it is best to travel with one larger check-in bag and one carry-on bag. We recommend a medium duffel bag and a medium day pack as carry on per person. These bags are easy to move around, can be toted easily fit in boats, small planes and van/bus roof racks. Backpacks can work too; do try to avoid large suitcases as they do not fit into the bow hatches of our water taxi and tend to get damaged in transit more often. While on tour with Island Expeditions, our staff will instruct you on how to prepare for travel between locations and we will provide storage for extra bags in our Dangriga office, when necessary. Most airlines have reduced the weight maximums for each bag to 50 pounds. Be sure to check with

your airline for weight restrictions.

You will find that one small (5-10 liter) waterproof bag that you can carry in the cockpit of your kayak and have handy on motorboat trips is very handy. It is especially important that electronic equipment such as digital cameras, video cameras etc are fully waterproofed especially while in the kayaks or on the motor skiff we use from the camp.

We strongly recommend that you pack your clothing in garbage bags INSIDE your duffel bag/packsack / suitcase as there is always the chance of rain while transferring bags to and from the boat docks to camps or waiting vehicles. Our luggage is stored in a water resistant area in the boat but a rule of thumb is to never consider a boat ride 100% waterproof.

GENERAL

As a general rule, don't bring more than you can carry. This will help to ensure smooth and efficient transfer in airports, though customs, hotels and loading vans. Please follow the Personal Equipment List as closely as possible. When traveling in Belize, luggage is placed on the roof rack of our vehicle and in storage compartments. Soft luggage is preferred over hard-cased luggage. This allows for easier transport onto roof racks or into stowage compartments on boats. Try to keep your gear in one main bag, preferably a backpack or duffel bag. Also carry a daypack to keep things handy that you will need during each day.

CARRY-ON LUGGAGE

With heightened security and busy airports it pays to pack wisely to make your airport travel run smoothly. For a complete list of important packing tips please visit www.tsatraveltips.us. Also, make sure everything you have is labeled, don't put any metal objects in your carry-on baggage or wear metal jewelry, clothing etc. and have all your luggage unlocked for inspection. Recent changes to carry-on luggage restrictions may disallow carrying any liquids on the plane with you, check your airport authority for most recent updates. If you purchase any duty-free liquids, previous to your trip into Belize, please check them into your main luggage, or you will have to surrender them to the airport authority. Also, If you have any special dietary needs contact your airline 48 hours or more prior to departure and plan to arrive at least 2 hours in advance for your international flight to Belize.

LIGHTHOUSE REEF ADVENTURE EQUIPMENT & PACKING LIST

TO DO LIST

- Check passport expiry date (be sure that your passport expiry date is at least three weeks after you are scheduled to return home.)
- Reserve international flights
- Fax or mail flight itinerary to IEC office
- Reserve hotel (*if overnight en route to or from Belize i.e.. Miami, Houston, LA etc)
- Pay flights and hotel
- Send final payment
- Mail medical form and waiver, completed and signed, to IEC office
- Receive air tickets and double check flight itinerary
- Receive a letter 2-3 weeks before departure with final rendezvous information
- Make two photocopies of passport-one to carry with you and one leave with family or friends
- Required inoculations up to date
- Gloat as friends and family members look on with envy

PERSONAL EQUIPMENT LIST

- Passport
- Photocopy of passport
- Air tickets
- Favorite snacks for between meals
- Personal spending and emergency funds
- 1 extra set of clothes for flight home
- 1 pair good walking shoes
- 1 pair water-sports sandals or shoes, Teva and Keenes are good brands
- 1 or 2 pair lightweight, fast drying long pants
- Underwear
- 3 - 4 pairs of socks
- 2 pair nylon shorts and/or loose skirt or sarong
- 1-2 bathing suits
- 3 T-shirts
- 2 long sleeved shirts preferably with a collar (for protection from the sun & bugs) Silk shirts work well and dry quickly.
- 1 fleece jacket or wool sweater (this will keep you warm even when wet)
- 1 good quality rain jacket
- 1 wide brimmed sunhat (to keep the sun off your face and neck)
- Sunglasses with band (Chums, Croakies, etc.)
- 1-3 bandanas (handy for sun protection)
- Spare set of eyeglasses (even if you wear contact lenses) and contact lens solution

- Headlamp and spare batteries
- Mask, fins, snorkel ***IMPORTANT***
- Shortie wet suit especially for kids – (not essential but water temperatures in Dec. and Jan. can be cool) and / or capilene, polypropylene or silk long underwear (great for snorkeling)
- 1 liter water bottle
- 1 beach towel—(either a camp towel or beach towel)
- Personal toiletries (please only biodegradable soaps and shampoos)
- Personal medication and prescriptions
- Small personal First Aid Kit: i.e.. Band-Aids, aspirin/Tylenol, scissors, tweezers, safety pins
- Sunscreen (non-Paba-based, SPF 15 - 35) waterproof for kayak trips-eg. Ombrelle
- Vaseline or skin care cream
- Caladryl/ After Bite/ Benadryl Cream or lotion to ease itching from bug bites
- Aloe Vera lotion
- Insect repellent (20 - 100% Deet)

OPTIONAL

- Camera equipment and film make sure it is in waterproof bag or container/ waterproof throw-away camera
- Binoculars
- Bug jacket
- Skin-So-Soft Avon used as repellent
- Handy Wipe - moist tissues for hands and face and/or waterless bacterial cleanser
- Toilet paper for emergency travels
- Lighter(s)
- Good reading book, log book and pen
- White wine (for sea kayaking trips, very hard to find in Belize-great with fish and seafood!)
- Liquors
- Personal coffee for extreme coffee drinkers (i.e.. special blends)
- Clothes line and pegs
- Small day-pack (can be handy on any of our trips)
- Mesh bag for carrying snorkel gear
- Fishing rod & tackle
- Art supplies, sketching tools or water-colors
- 1 pair light cotton gloves /bike gloves (for protection from the sun/blisters when paddling)
- Aquasocks
- Foot Powder

TRIP CONDITIONING

In order to best prepare for an IEC trip, the following exercise plans are recommended. It is good to begin exercises a minimum of two weeks before your scheduled departure. To facilitate paddling, the following is a list of exercises for wrist, arm and upper body strength.

- ❑ Sit-ups: 10 to 20 per session, 1-3 times daily
- ❑ Push-ups: (5- 10 per session, 1-3 times per day)
- ❑ Wrist-curls: 2-3 per session, 1-3 times per day. To perform: take a 2 ft. long rounded baton (a stick, dowel or cut-off broom handle will do), attach a length of sturdy rope (measuring 2-3 ft.) in the middle of the baton and to this, tie a light weight bag filled with sand or a rock (approx. 2lbs) to the end of the rope. Grasp baton with both hands on either side of rope, straight out from your body, and wind the weight up and down, turning the baton alternately in one hand and the other, until the rope is wound around the baton and then unwound
- ❑ To improve your snorkeling ability, some time at a swimming pool is encouraged. Practice swimming not only lengths but, also legs-only. Also try out your snorkeling equipment in the pool to ensure comfort if you have not used the equipment before.

PHOTOGRAPHY

There are no limits to the types of cameras you can bring along. **Please note your camera gear must be waterproofed for any boat rides out to the cays.**

FOR THE SERIOUS: 35 mm cameras with a wide angle (24 mm, 28 mm) and zoom (28-70 mm) or telephoto lenses (35-80 mm, 70-210 mm) are good combinations. A "universal lens" 28-150 mm zoom with macro is very useful. A wide-angle coverage flash is very useful for filling in shadows and reducing high light contrast. For wildlife photographers, a 300 mm or longer lens is needed. Because of the nature of our travel, a waterproof system such as the "Pelican" case to keep your camera dry is highly recommended. For kayak and river trips, this plastic hard-shell box can be mounted on the deck of your sea kayak or in your river boat and will give the best protection from the elements, as well as allow you quick access to your camera. Bring along a few silica gel packs to absorb moisture within your camera box. Waterproof cameras are especially suitable for reef and river trips. It is advisable to have your camera equipment insured.

DIGITAL CAMERAS: Bring enough memory storage cards and extra batteries as you will not be able to charge your batteries while out on the islands. We can charge batteries when we stay at lodges or hotels on the mainland. It is important to keep these cameras in an air and water tight storage container. The salt air and sea water will penetrate the housing and affect its performance. For kayak trips, a separate waterproof box or bag is highly recommended.

FILM: Purchase all the film that you need before leaving home, For slide film, use Fuji Velvia 50 ASA for the water, Astia Fuji Provia & Sensia 100 & 200 ASA for general photography in the jungle Fujichrome 400. For print film, we recommend Fujicolor and Kodak Gold 100 & 200 for most days and Kodak and Fuji NPH 400 for overcast days and inland shots Don't forget extra batteries for both your camera and flash!

VIDEO: Remember to bring enough film for the length of your stay. In addition, you may wish to bring 1 or 2 more battery packs than usual. It will be very difficult to charge batteries out on the cays. While on inland trips some lodges use electricity on a limited basis. For kayak trips, a separate waterproof box or bag is highly recommended.

NOTE: Camera equipment & other electronics should be waterproofed for boat transfers and while in the kayaks.

FISHING

Our camp is located within a protected marine reserve where no fishing is permitted. However we only have to travel a mile or so from our camp to put us right in the midst of prime fishing grounds. Barracuda, grouper, jacks, snapper, mackerel and tarpon are some of the more prized fish we catch with spin-casting gear or simple bait-trolling rigs. Fly-fishing for bonefish (catch and release only, please!) is unmatched for light tackle challenge and excitement. For spinning rods a medium stiff rod and reels that can hold at least 10 lb line. On the trip, there are always a few extra "tow lines" (100 yds of 30 to 50 lb test on a stick or float with wire leader) available for trolling from your kayak or the motor skiff, just ask your guide and they will fix you up so you can try your hand at some Belizean style fishing.

It is crucial that you have light-weight and fast-drying clothes to protect you from the sun. Much of the time while fishing (particularly when fly-fishing), you will be wading or walking the reef flats, and the sun, the heat and glare can be intense. A comfortable sunhat, good sunglasses (Polarized lenses work best for being able to see through the reflection off the water) are necessary. A pair of light, cotton, fingerless gloves work well to protect the back of your hands from the sun and allow minimal interfere with your working the reel. For footwear; rubber sport sandals, an old pair of canvas runners or neoprene reef walkers are perfect.

SPIN CASTING TACKLE

The type of tackle that you bring with you will depend on what type of fish you want to catch and how serious you are about fishing. They say in Belize that you don't go "fishing", you go "catching". Popular wisdom is that: if you put your line into Belizean waters you will catch something! With many hundreds of miles of unspoiled fishing grounds, Belize is a superb sport-fishing destination. In Belize, bonefish, tarpon, barracuda, jacks and king mackerel are plentiful. Permit are also a prime catch but can be very difficult to find.

If you are bringing your own equipment the following list of items may be useful:

- Spin-casting rod and reel (10-20 lb test)
- 100 yds of 20-50lb test fishing line for hand-linefishing
- 5-10 wire leaders
- Assortment of single hooks and a very large 1"-3" bait-hooks
- Silver/pink/green trolling and casting spoons, large Rapalas, or Tomic plug.
- A variety of weights
- Thick glove to use for handling fish.

FLYFISHING

Although our kayak adventures are not designed as exclusive sport-fishing trips, we are traveling through some of the richest bonefish and tarpon waters in the western hemisphere. Often the best fishing is done right from where we are camping, particularly if there are accessible sand flats, mangroves or abrupt drop-offs. When paddling or sailing your kayak you can troll a weight forward or sinking line. This is a good way to catch barracuda, grouper or snapper. You never know - you may even hook into a tarpon!

For bonefish you want to have a 7 or 8 weight rod, nine or ten foot depending on the size of the fish and the flies you are using. A 5 or 6 weight stream fishing rod will do just fine for smaller bonefish and can be great fun but you will wish you had heavier gear if you hook into a 3 or 4 pound fish. Effective bonefish flies are Crazy Charlies #4, #6, #8 in gold, tan & pink. Horror's # 4, 6, 8 in orange, and Snapping Shrimp # 4, 6 in tan. A heavier tippet of 10-12 lb will hold up well in the shallow coral & rubble strewn waters which are the most common fishing for Bones at Glovers. The heavier rod weights will work for jacks, and barracuda as well. If you plan to fish for tarpon we suggest 10, 11 or 12 weight rods.

Apart from matching the right reel to the type of fish you are going after, the most important thing is a reel that can handle the harsh saltwater conditions. You need to be religious about washing your reel in freshwater each day, particularly if you are using the reel you bought for trout fishing at home. Many of the fish you will hook are fast and unbelievably strong, therefore, your reel should hold a minimum of 150 yards of backing, and 20 to 30 pounds test or more for tarpon. A weight-forward, tapered floating line is good for bonefish, you will want a sinking line as well for tarpon. If you are serious about your fly-fishing you should bring an extra line with you. Nine to twelve foot leaders are fine, heavier and shorter leaders are easier to fish within the difficult, windy conditions that are often encountered on the Belize reef. 2X & 4X for calm conditions in shallow waters and 1X, 0X, or 02X are also okay.

***Note: Inside the Glover' Reef Marine Reserve all fishing is catch and release only. The Reserve boundary is not far from our island basecamp and on each trip guides will lead fishing trips outside of park boundaries where we can catch and keep our catch.**
